In view of the Appeal Brief filed on June 23, 2010, PROSECUTION IS HEREBY REOPENED. The new ground of rejection is set forth below.

To avoid abandonment of the application, appellant must exercise one of the following two options:

(1) file a reply under 37 CFR 1.111 (if this Office action is non-final) or a reply under 37 CFR 1.113 (if this Office action is final); or,

(2) initiate a new appeal by filing a notice of appeal under 37 CFR 41.31 followed by an appeal brief under 37 CFR 41.37. The previously paid notice of appeal fee and appeal brief fee can be applied to the new appeal. If, however, the appeal fees set forth in 37 CFR 41.20 have been increased since they were previously paid, then appellant must pay the difference between the increased fees and the amount previously paid.

A Supervisory Patent Examiner (SPE) has approved of reopening prosecution by signing below:

/Shaojia Anna Jiang/

Supervisory Patent Examiner, Art Unit 1623

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 12, 13, 21, 29 and 32-38 are rejected under 35 U.S.C. 103(a) as being unpatentable over Petyaev (WO 03/017992) in view of Moriel et al (Biol. Res. V.33 n.2 Santiago 2000).

The claimed methods are directed to reducing apolipoprotein-B levels in the vascular system comprising administration of azithromycin and acetylsalicylic acid (aspirin).

Petyev discloses the treatment of atherosclerosis with a combination of azithromycin and aspirin (page 10). Petyev further teaches on pages 10-11 that administration of azithromycin and aspirin reduces the level of abzymes in the vascular system of an individual thus inhibiting lipid oxidation. Moriel et al disclose that the development and progress of atherosclerosis is associated with lipid oxidation. Moriel et al also teach in TABLE 1 the increased level of apolipoprotein B in hypertensive patients.

Based on the teaching by Moriel et al, a person having ordinary skill in the art at the time the claimed invention was made would have been motivated to use a composition known to be useful for inhibiting lipid oxidation disclosed by Petyev to patients with increased levels of apolipoprotein B levels in order to reduce said levels because the results obtained by such an administration would have been an expected reduction of apolipoprotein levels in the vascular system of a patient.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Elli Peselev whose telephone number is (571) 272-0659. The examiner can normally be reached on 8.00-4.30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Shaojia Jiang can be reached on (571) 272-0627. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
